

SPONSORSHIP PACKAGE

Season 2026 - 2027

THE UK'S LARGEST NON-COMBAT ROBOTICS
COMPETITION FOR UNIVERSITY STUDENTS

Email hello@unibots.uk

Welcome from our Directors

Dear ...,

Thank you very much for considering to sponsor Unibots!

You reach us at the perfect time as we begin our expansion to new regions of the UK. As recent graduates, we know all too well how students throughout their university journey sometimes only learn the theory, or, are only given the opportunity to learn the theory.

That's where Unibots - and you - come in! Our mission is to provide an environment and pathway where students' practical skills are honed, creativity is fostered, and innovation flows!

We're incredibly excited for this next season, and we look forward to sharing with you about our current success, future plans, and hopefully making new strategic long-term partners!

– Petar, Bruce and Liza

Our Growth

Beginnings

Unibots was originally created as a student competition by societies from the University of Southampton and the University of Cambridge

2022

Growing

The second year, the competition grew, jumping to a bigger space at the University of Cambridge

2023

Expanding

Heriot-Watt University Robotics Society joined the organising societies introducing the presence of Scottish Universities in the competition

2024

Strengthening

Student retention grew considerably with teams returning to the event year after year

2025

Evolving

Unibots progresses into a new format including regionals and a UK-wide finals event in London.

2026

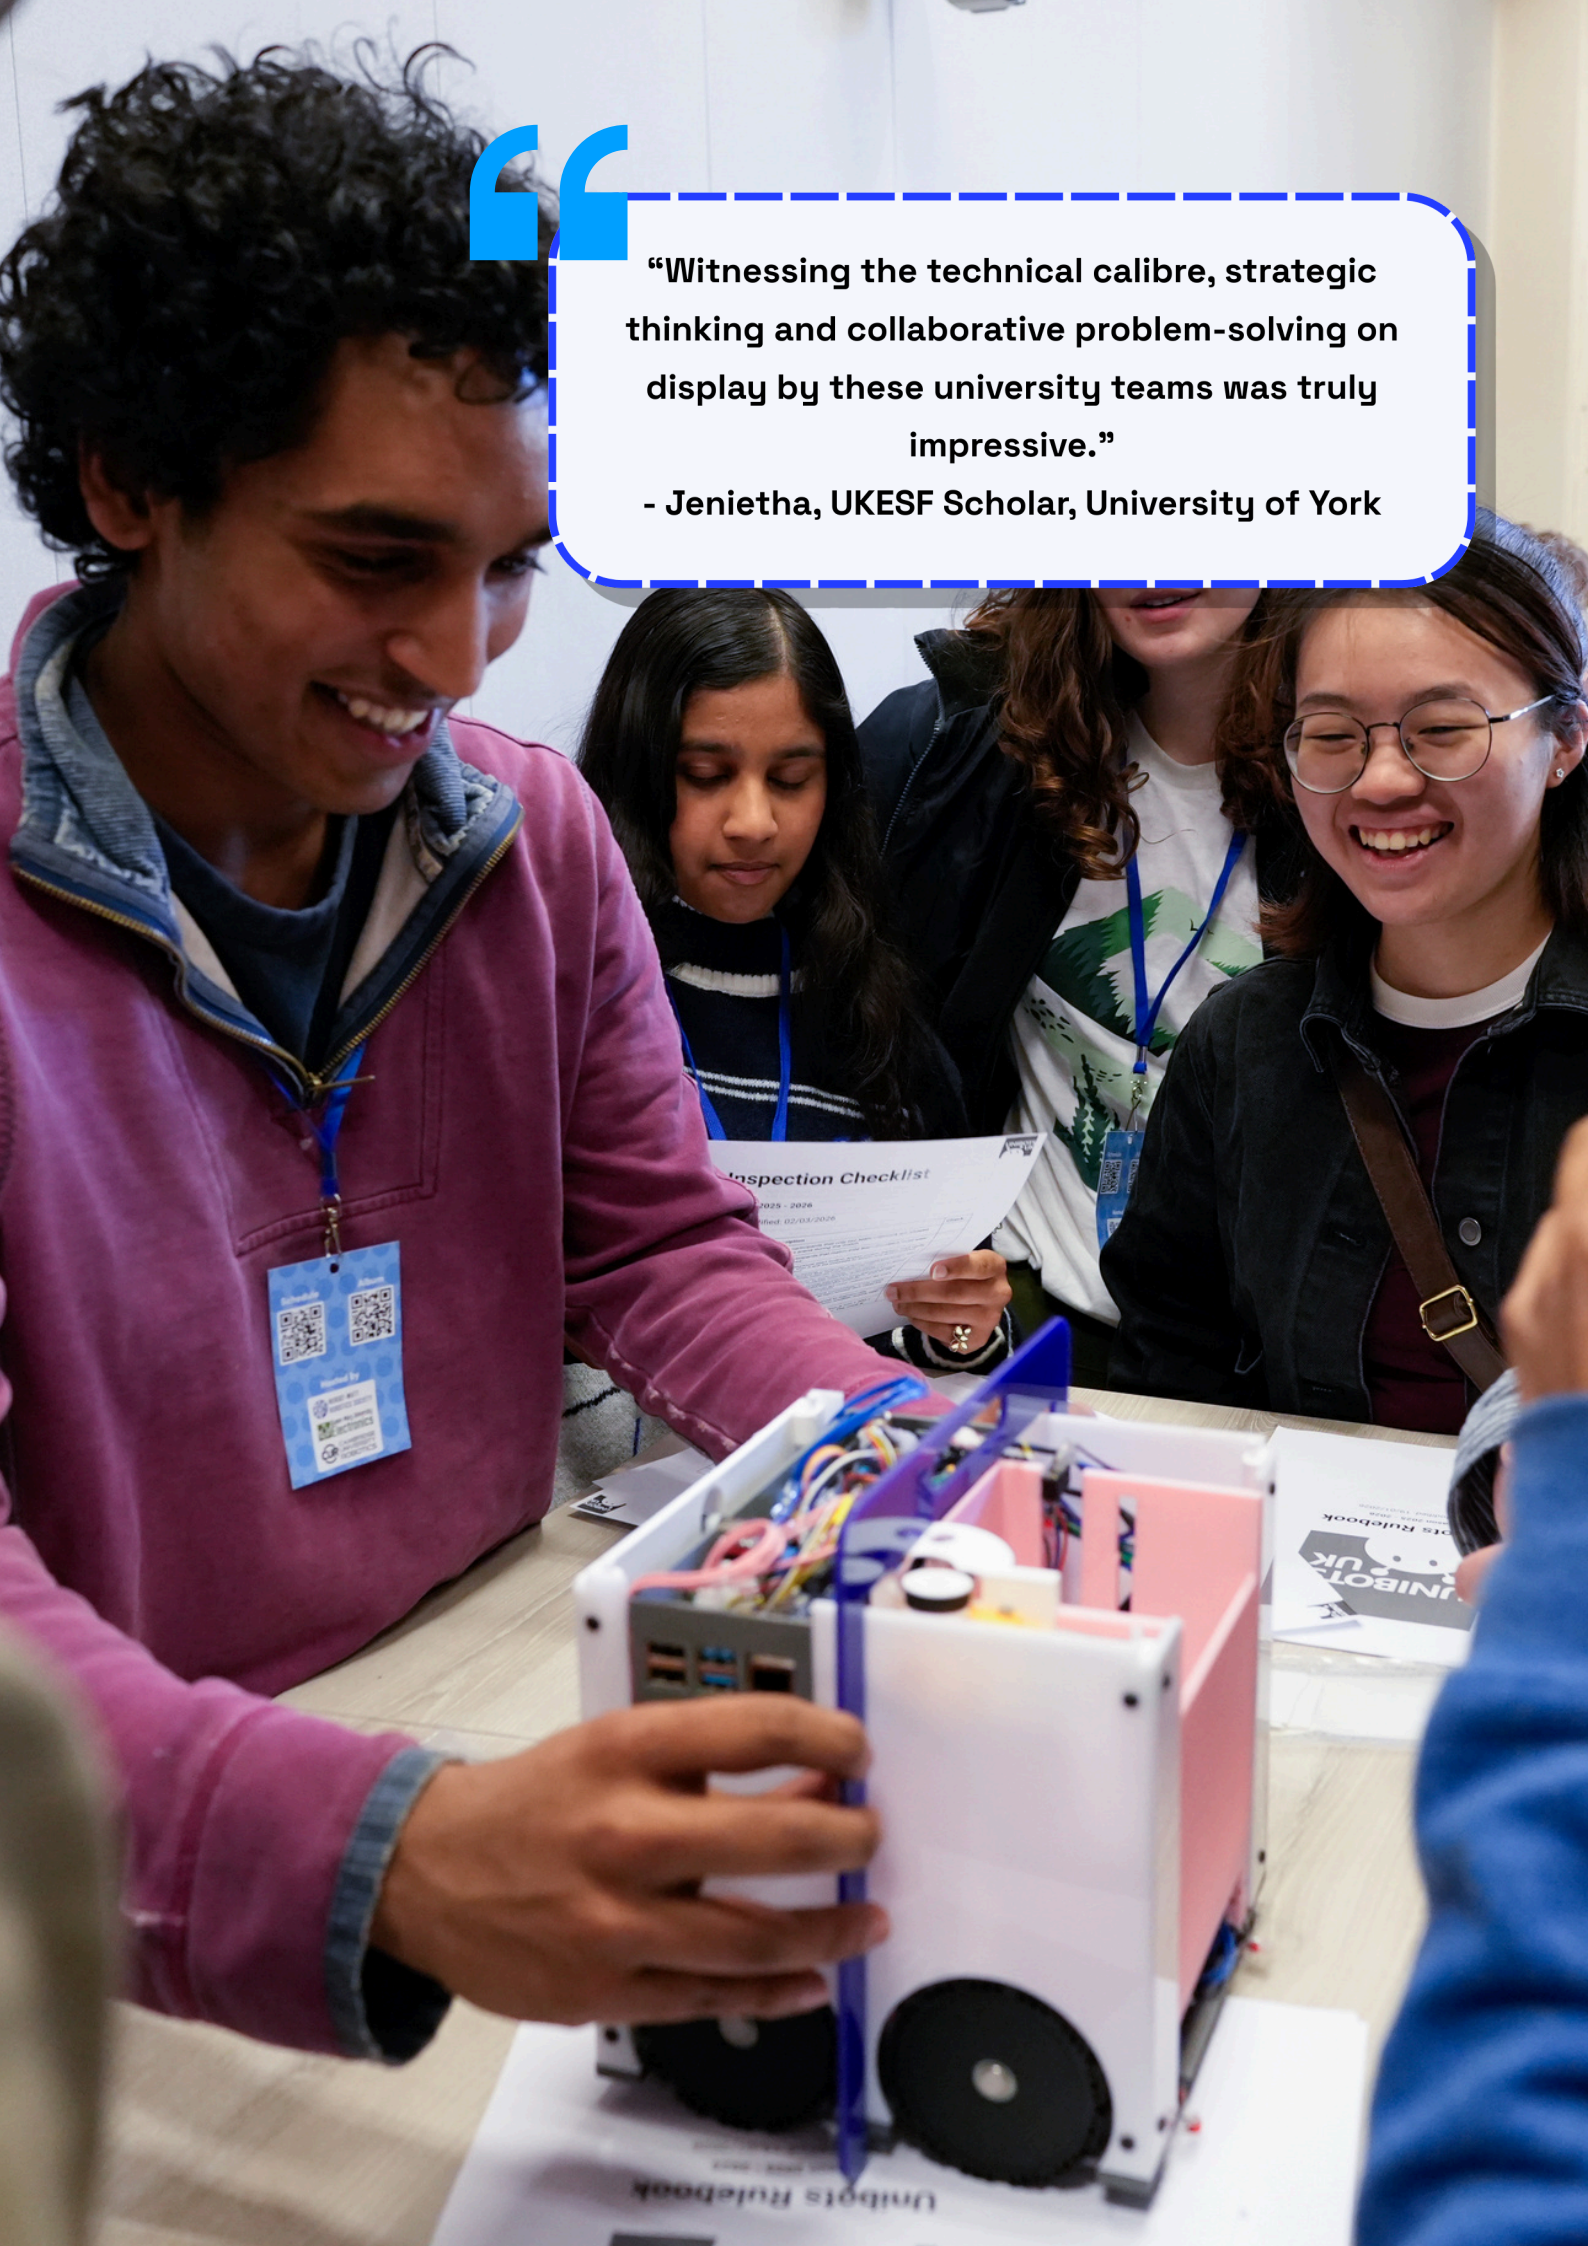

Transforming

We continue to grow by introducing new regionals, partnering with more universities and sponsors and transforming into a community interest company to champion the UK's leading university robotics competition

2027

“Witnessing the technical calibre, strategic thinking and collaborative problem-solving on display by these university teams was truly impressive.”

- Jenietha, UKESF Scholar, University of York

More than a Competition

Unibots creates a space for students to learn, understand, and compete in autonomous robotics. Through our approach of project-based learning, we provide an environment where students are able to apply and develop skills touched on by university, but often not explored in-depth. Those are often the very skills which employers look for - the ability to transfer knowledge and problem solve.

Growing practical skills is just the start of it! Unibots also creates a space for students to connect with like-minded other students, providing networking opportunities with purpose. We want to encourage collaborations between universities and industry, sharing of employment opportunities, and even entrepreneurship. (Did you know: 40-50% of UK-based startups were founded by university students!)

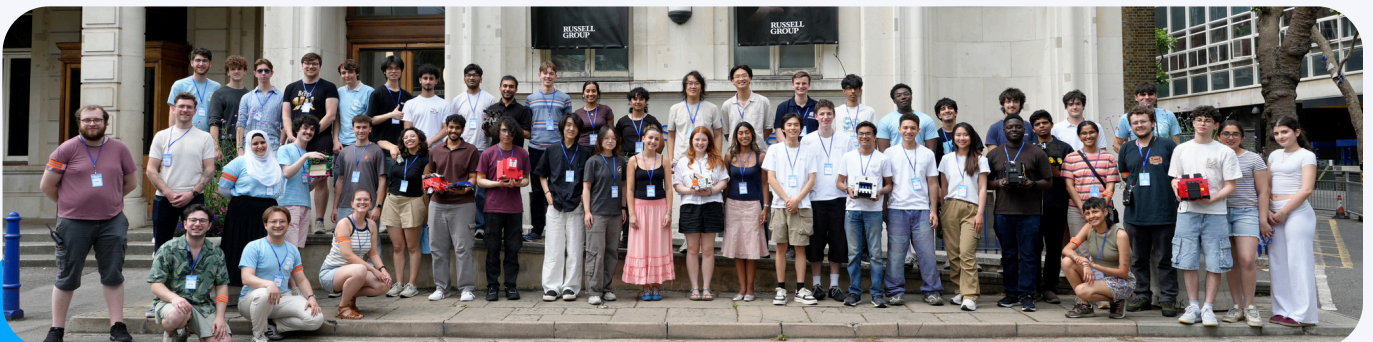

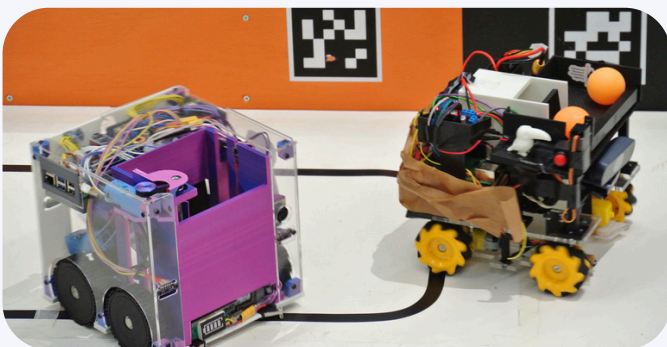

WHAT THE TEAMS ENJOY THE MOST:

"I really enjoyed how open every team was to talk about how they built their robots and how their software works!"

"It meant long hours of debugging, redesigning, testing, failing, and trying again, exactly the kind of challenge that pushes you to grow as an engineer!"

"It's an enriching experience for learning, passion, and hard work, and will spur us on for better designs in the future."

"I learned a lot in the process of making the robot; not only did it improve my programming skills but it also gave me the experience of working in a very interdisciplinary team."

Why Sponsor Unibots?

Position your organisation at the forefront of robotics education and innovation.

DIRECT TALENT ENGAGEMENT

Our competing students are highly motivated and highly skilled in engineering, robotics, and much more. Sponsoring us gives the chance to **discover and engage directly with students, promote internships, graduate schemes, and placements and training.**

"...I don't often speak to as many enthusiastic and passionate [students] all at the same time. There's a buzz and an energy here that you rarely find anywhere..."

Ryan Sheridan,
Customer Success Manager
for UK Education at Autodesk

BRAND POSITIONING

Unibots hosts the leading university level robotics competition in the UK. By supporting our organisation, you gain access to a **network of students, academics and other organisations across the UK** with similar aims and values in sustainable technology development. Your support will be visible across **events, social media and the web.**

"...I know from talking to employers what they really want to see in their graduates is curiosity, determination and a real interest in engineering and we've seen that in spades today [at the Finals event]..."

Stewart Edmondson,
CEO of the UKESF

PRODUCT EXPOSURE

Product sponsorship allows **students to become familiar with your technology through practical application during the competition season.**

Unibots offers an authentic and unique platform to showcase and test out your technology with highly engaged engineering students from universities across the UK.

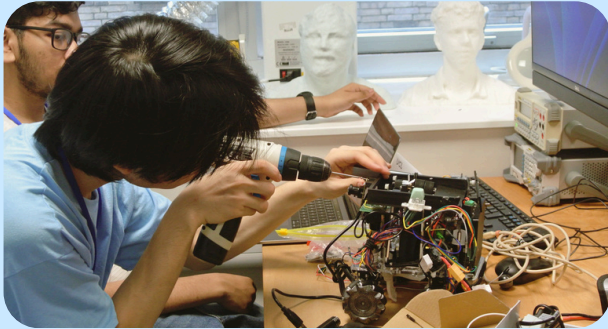

“Sometimes, I ask myself whether it is worth continuing to try when there are so many difficulties and challenges along the way. I think the answer will always be yes. That’s why I keep participating in new competitions — not only to build better robots, but also to develop the resilience to keep going when things don’t go as planned.”

- Yudong, Team #10, University College London

The Season: Regionals

Venues will be confirmed and revealed by Sunday 27th of September 2026.

NORTH ENGLAND

6 FEBRUARY 2027

Our reach in the North of England has been growing over the years, with recurring students from Nottingham, Edge Hill and more. Opening a Regional in this region will ensure the students have the same opportunity to participate.

SCOTLAND

20 FEBRUARY 2027

Scotland's fast growing robotics sector means far more students are choosing to study robotics in Scotland. To give them the opportunity to showcase their skills while still at University, the first regional of the year takes place in Edinburgh!

SOUTH-WEST

27 FEBRUARY 2027

Students from universities around Birmingham and Bristol have been requesting us in having a regional in the South-West of England as the Cambridge regional is often too far to attend.

CAMBRIDGE

20 MARCH 2027

Home to world-leading innovation, historic excellence, and a vibrant tech ecosystem, our last regional of the season takes place in Cambridge. Students from London and South East are invited to join the Cambridge Regional to test their robots.

Mid-season dates:

This year we are adding two “**check-In**” dates with our teams. These calls give teams the opportunity to ask questions, clarify design choices, and get help where they need it. These are currently scheduled for:

- November Check-In (pre-regionals)
- April Check-in (post-regionals and pre-finals)

We are also opening the season calendar to **workshops and training sessions** delivered by our sponsors. Returning sponsor Autodesk is planning a series of Fusion 360 CAD workshops this season, following feedback from last year’s participants. Robot design was identified as an area where teams wanted to develop their skills, and the workshops will therefore address this knowledge gap by providing practical training based directly on student feedback.

If that something interesting you, please reach out to start a conversation.

The Season: Finals

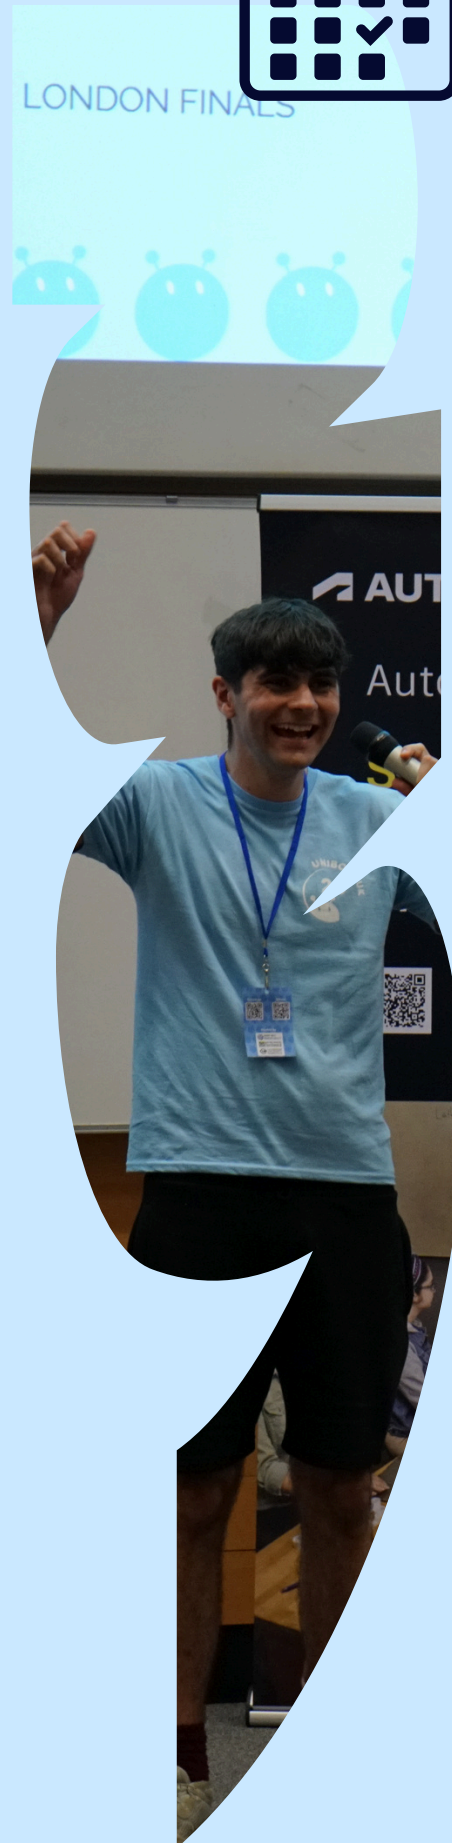

LONDON

12-13 JUNE 2027

After a season of testing, trial, and error, teams compete for the top prizes in London! Over the course of two days, teams will enjoy head-to-head competition, networking, and talks by you, sponsors!

University College London

“This project was the ultimate hands-on experience for my year, pushing my technical limits and teaching me critical team-building skills. when I later stepped up as co-team lead, I gained invaluable experience in task management, resource allocation, and the importance of maintaining a positive, solution-oriented outlook to keep the team motivated. I walked away realising that my successful product is always a result of an organised, highly collaborative, well aligned team.”

- Lorenzo, Team #21, King’s College London

Behind Unibots

Unibots is led by a team combining robotics engineering, research, and education expertise along with public engagement and event management.

Bruce Wilson

PhD candidate in Human-Robot Interaction, studying the importance of narratives. He brings a depth of experience in robot design, game design and software engineering, along with his wide experience in working with charitable organisations.

Liza Masson

Robotics engineering graduate and a previous Schools Outreach Officer at the National Robotarium, currently working as Project Manager. She brings hands-on experience planning physical and online events, along with a strong focus on public engagement and STEM outreach.

Petar Kotsev

Robotics engineering graduate and current PhD student in Neuro-Symbolic computer vision systems. He brings a span of experience across engineering education and robotics software development.

A special thank you to...

2025-2026 Season Sponsors

2025-2026 Season University Partners

Organisations we've worked with

Sponsorship Packages

Every sponsorship can be tailored around your objectives - whether it's recruitment, brand visibility, or product use! Your company won't just appear on a banner - it will become key to the engineering student's experience.

Community Sponsor

£500

Ideal for companies looking to support UK robotics education while gaining brand visibility

Talent Sponsor

£1,000

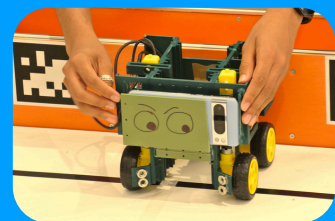

Perfect for organisations wanting to engage directly with engineering students and showcase products

Innovation Sponsor

£3,000

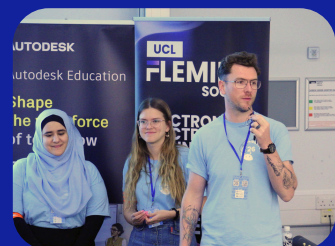

Designed for companies looking to recruit emerging talent and promote robotics careers

Strategic Sponsor

£5,000+

Bespoke partnership aligned with your recruitment, innovation and objectives

Thank You
